LITEON Technology (2301)

Profile and Advisory Report

For the Chairman, CIO and CHRO

Position: IT AI Platform Lead (Neihu, Taipei)

Leadership profile, track record, AI platform methodology and an advisory view on LITEON's IT AI platform

Howard Liao Ph.D.

Lettera TO THE CHAIRMAN, CIO AND CHRO OF LITEON TECHNOLOGY

Taking AI from point solutions to a shared LITEON platform

I am Howard Liao. For twenty-five years I have worked across US software, multinational electronics manufacturing, a listed digital platform and group headquarters, from technical manager and IT Director to CIO and VP of Technology. This document answers three questions: who I am, what I have delivered, and what I can bring to LITEON.

LITEON stands where two major moves meet: S/4HANA goes live worldwide on 2027.01.04, and AI-related revenue is already above 30%. The IT AI Platform Lead's job is to place AI beside SAP, PLM and MES, turn scattered departmental PoCs into reusable data products and platforms, and report to leadership in figures the CFO signs off.

My way of working is simple: make the business goal clear, align systems, data and AI investment with it, and close with numbers leadership reads, such as yield, OEE, TCO and lead time. Part III is my advisory view for LITEON: current health, ten technical-debt hypotheses, five strategic pillars, capital allocation logic and a four-quarter roadmap in step with the S/4HANA cut-over.

I look forward to explaining in person, and every figure in this document can be checked.

Howard Liao

Fit with the LITEON role

No degree or industry limits	Ph.D. in IT Management; electronics manufacturing, US software, listed platforms
10+ years leading AI / data teams	More than 15 years in total
Led AI platform launches with measurable results	Yield +15%, automation +55%

> Preferred: built platforms and teams from zero, C-level communication, CIO experience, large-enterprise transformation — all four met.

25+ years in IT and 15+ years as CIO and technology executive across electronics manufacturing, global software vendors and listed digital platforms. I turn board-level business goals into IT and AI investment portfolios, lead architecture decisions personally, and deliver results measured in yield, OEE and TCO. As an ISO 27001 and ISO 42001 Lead Auditor, I balance the speed of innovation with clear governance guardrails.

Profilo PROFILO · 02

An engineer who became an operator

I started as a database engineer. At a US software company I learned to explain technology as customer value; in multinational electronics plants I learned the weight of one production line and one point of yield; at a listed platform I learned to keep core services running with zero downtime at global scale; at group headquarters I learned to speak to the board through governance documents and budget frameworks.

These years taught me that AI creates value not because the model is new, but because data is connected, processes have owners and results are signed off.

AI-generated scene

> *Technology is the means, not the headline.*

Leadership philosophy

01

Go to the floor

Break pain points with the business into production releases within weeks.

02

Empower the front line

The platform team supplies standards and components; business teams build their own use cases.

03

Keep the knowledge

SOPs, architecture decision records and knowledge bases reduce dependence on any one person.

04

Talk in numbers

Every use case has a baseline, a target and an owner, reviewed openly each quarter.

Dr. Howard Liao

Enterprise AI platform and digital transformation leader | VP of Technology / CIO / CISO

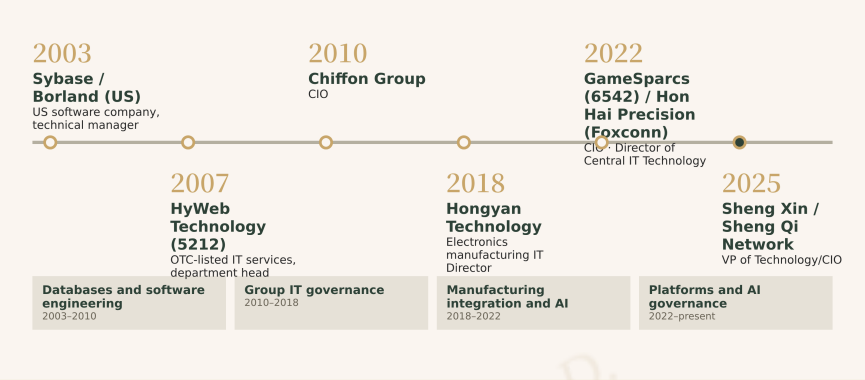

Move AI from point solutions to a reusable platform with economic value visible to leadership

Howard Liao Ph.D.

Twenty-five years, one thread: turning systems, data and AI into business results

From US software and listed IT services to a holding group, multinational electronics, a listed digital platform and group headquarters.

2025.05 – present	**Sheng Xin / Sheng Qi Network | VP of Technology/CIO** Multinational internet technology platform (Taipei, Kaohsiung, Shanghai)	Chaired the architecture review board; API-first and Kafka/EDI/IDoc integration standards; DevSecOps quality gates; ISO 42001 AI governance; Agentic AI workflows	Agentic AI +55%
2026	**Enterprise information architecture advisor (part-time)** Multiple industries, clients not named	Group IT strategy and investment plans, enterprise architecture blueprints, ERP and manufacturing systems integration blueprints, security governance plans	AI architecture blueprint
2022.09 – 2025.04	**GameSparcs (6542) | Director of Information Technology (CIO/CISO)** OTC-listed digital technology platform (Taichung, Taipei, overseas)	Core services migrated to Kubernetes; global data management platform; FinOps; ISO 27001 and zero trust	TCO –30%, zero downtime
2022	**Hon Hai Precision (Foxconn) | Director of Central IT Technology** Global electronics manufacturing	Group enterprise architecture decisions, gap analysis and digital transformation planning	Enterprise architecture
2018.10 – 2022.09	**Hongyan Technology | IT Director** Multinational electronics manufacturing (three sites in Taiwan, two in China)	Post-merger SAP S/4HANA consolidation connecting MES, PLM and APS; Edge AIoT; IEC 62443; B2B EDI	Yield +15%, OEE +18%
2010 – 2018	**Chiffon Group | CIO** Cross-industry holding group	Group IT governance, systems integration and data teams	Data governance
2007 – 2010	**HyWeb Technology (5212) | Department head** OTC-listed IT services	SOA architecture, business portal, ITIL service governance	—
2003 – 2007	**Sybase / Borland (US) | Technical manager** US enterprise software	Database, middleware and ALM technical consulting and delivery for Greater China	Database
Ongoing	**Advisor to Taichung Veterans General Hospital; managing director of the Kang Shan Foundation** Healthcare and nonprofit	Healthcare data integration, smart long-term care and nonprofit digitalization	Healthcare data

Valore PROFILO · 04

The board is not buying technology, but four kinds of certainty

01

Certainty of investment

Every AI use case has financial assumptions, a PO and a P and L line; launch conditions are set before the PoC and reviewed quarterly.

02

Certainty for core systems

The S/4HANA core stays untouched and MES / PLM are not rebuilt; AI reads data beside them and writes back only after human approval.

03

Certainty on risk

Lead auditor for both ISO 27001 and ISO 42001; data classes, model risk, IEC 62443 zoning and red lines in place from the start.

04

Certainty in the organization

Central platform plus embedded business teams; successors for every lead, a PO Academy and a Champions network keep the capability at LITEON.

AI-generated scene

> *Move AI from point solutions to a reusable platform with economic value visible to leadership*

Competenze PROFILO · 05

Technical and managerial competencies, equal weight

The six responsibilities in the job description

#	Responsibility	How I would do it	Onboarding metric
01	**Define priority AI domains with senior leadership and plan the AI platform blueprint**	Score on three axes — economic value × feasibility × reusability — and set the investment portfolio together with business-group heads; submit to leadership with a one-page decision sheet.	Within 90 days, an AI value map and financial assumptions for the top 5 use cases
02	**Turn scattered applications into reusable data products and platforms**	Extract shared components — model gateway, knowledge base, data products, agent orchestration and monitoring — and let new use cases launch from templates on a golden path.	New use cases go live in weeks instead of months
03	**Build an AI stack that complements SAP, PLM and MES**	Keep the SAP core untouched and do not rebuild MES/PLM; read data through APIs, CDC and event streams; AI writes back recommendations that are executed only after human approval.	First supply-chain AI use cases live within 6 months of the S/4HANA go-live
04	**Build the AI organization and talent pipeline; lead AI technical leads and engineers**	A dual-track organization of central platform + embedded business teams; competency model for technical leads, nine technical career tracks and succession plans.	At least one ready successor for every technical lead
05	**Build business-led platform teams and develop internal POs to drive AI-native ways of working**	PO Academy: business leaders learn to write use-case financial assumptions and acceptance criteria; Champions network; leaders learn first, IT pilots first, then scale what works.	30 certified POs in year one
06	**Report results regularly to senior leadership and business unit heads**	Monthly AI value dashboard, quarterly AI investment committee, semi-annual report to the Chairman — in the language of EBITDA, ROI and TCO.	Benefits reviewed openly every quarter, amounts confirmed by the CFO

Cases and methods

Three career cases, earlier roles and advisory work, and two methods ready for LITEON: the six-layer AI platform architecture and NIST CSF 2.0 cyber resilience.

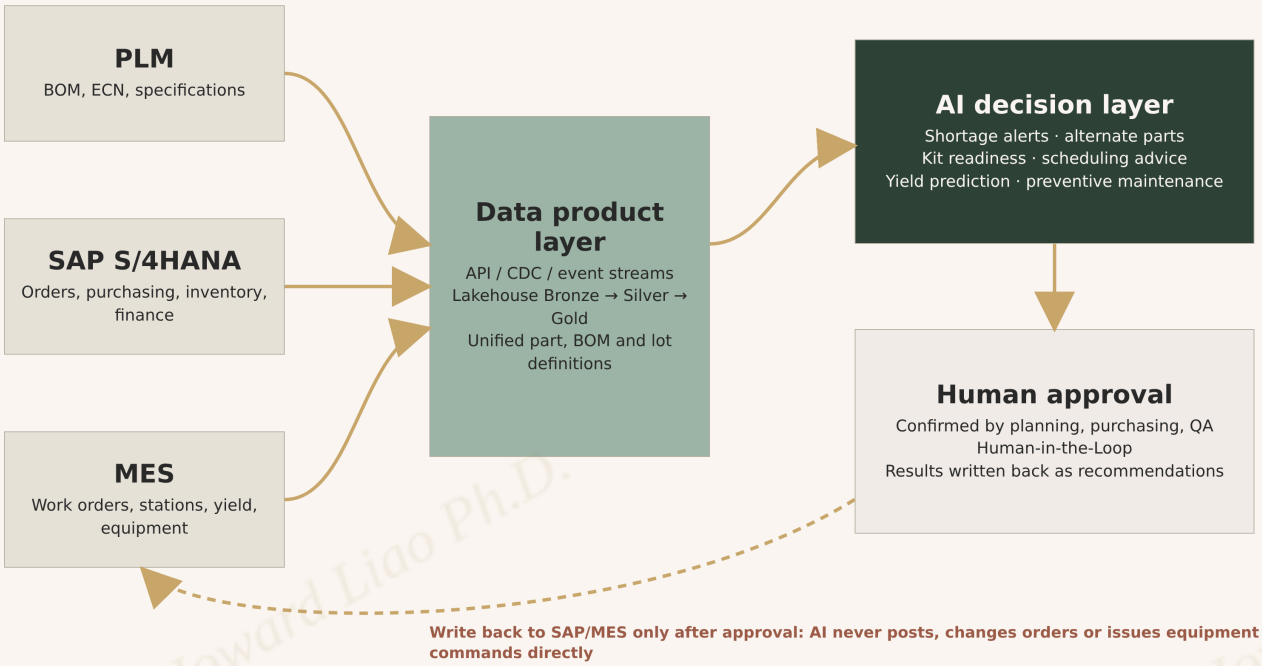

AI-generated scene

Caso 01 HONGYAN TECHNOLOGY

Manufacturing AI built on an integrated core

HONGYAN TECHNOLOGY · IT DIRECTOR | 2018.10 – 2022.09

Data first, then AI: a closed loop complementing SAP, PLM and MES

Situation

After the merger each plant ran independently with no capacity visibility, creating data silos and a large amount of slow-moving inventory.

Approach

- SAP S/4HANA standard functions first (Clean Core), connected with MES, PLM and APS
- Edge AIoT data platform covering 1,000+ machines, with AI defect prediction and predictive maintenance
- Planned OT/IT segmentation per IEC 62443; built B2B EDI for brand customers

Results

+15%	+18%	−25%
Yield	OEE	IT operating cost

What it means for LITEON

AI extension after S/4HANA go-live, MES alternate-part and kit-readiness recommendations, replication template for new plants

Caso 02 GAMESPARCS (6542)

Platform engineering with zero downtime

GAMESPARCS (6542) · DIRECTOR OF INFORMATION TECHNOLOGY | 2022.09 – 2025.04

CIO IT Manager feature interview

ACE industry interview

Situation

New products every month; the old database could not handle peak concurrency; each project built its own environment, creating a heavy operations burden.

Approach

- Migrated core services to Kubernetes with CI/CD, halving the release cycle
- Built a global data management platform with cross-region clusters
- Introduced FinOps; established ISO 27001 and a zero-trust architecture

Results

Zero downtime
Core services

−30%
Multi-cloud TCO

×2
Release speed

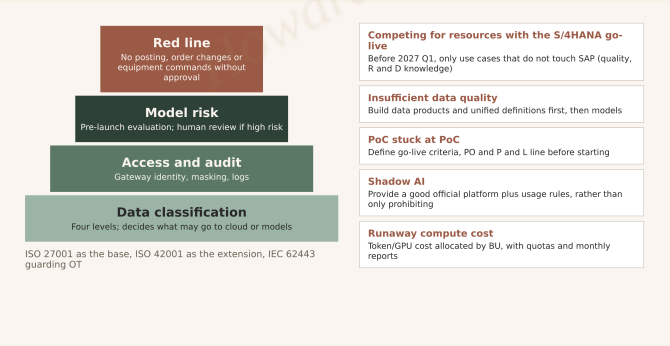

What it means for LITEON

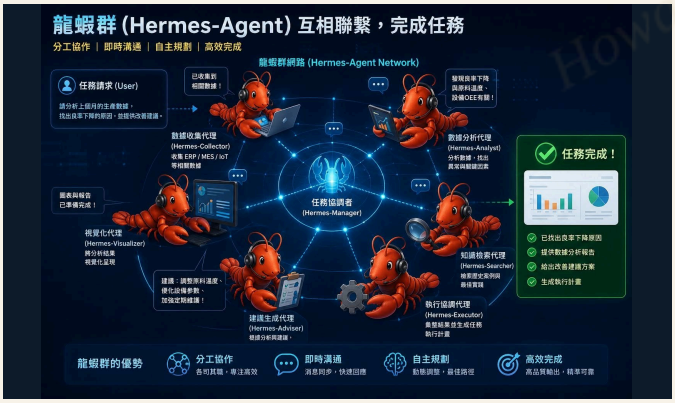

Move from departmental AI tools to a shared platform, running old and new in parallel with rollback

Caso 03 SHENG XIN / SHENG QI NETWORK

AI governance and agents in production

SHENG XIN / SHENG QI NETWORK · VP OF TECHNOLOGY/CIO | 2025.05 – PRESENT

Hermes-Agent · Multi-agent

Situation

Fragmented multinational cloud assets and a shortage of security talent; employees using AI tools on their own created a high risk of data leakage.

Approach

- Chaired the architecture review board and set API-first and integration standards
- DevSecOps quality gates + AI code review and test generation
- Set AI usage rules and data classification under ISO 42001; AI workflow training for managers
- Agentic AI workflows with human-in-the-loop for high-risk actions

Results

+55%	-40%	-35%
Automation efficiency	Lead Time	Defect escape

What it means for LITEON

A direct template for LITEON's AI usage rules, PO Academy and agent rollout

LITEON AI platform: six layers plus a governance axis

Data first, then AI. The three core components, HowardAGent, HowardRoute and HowardPro, sit on the Project Hive API platform and lakehouse, with an ISO 42001 management system across every layer.

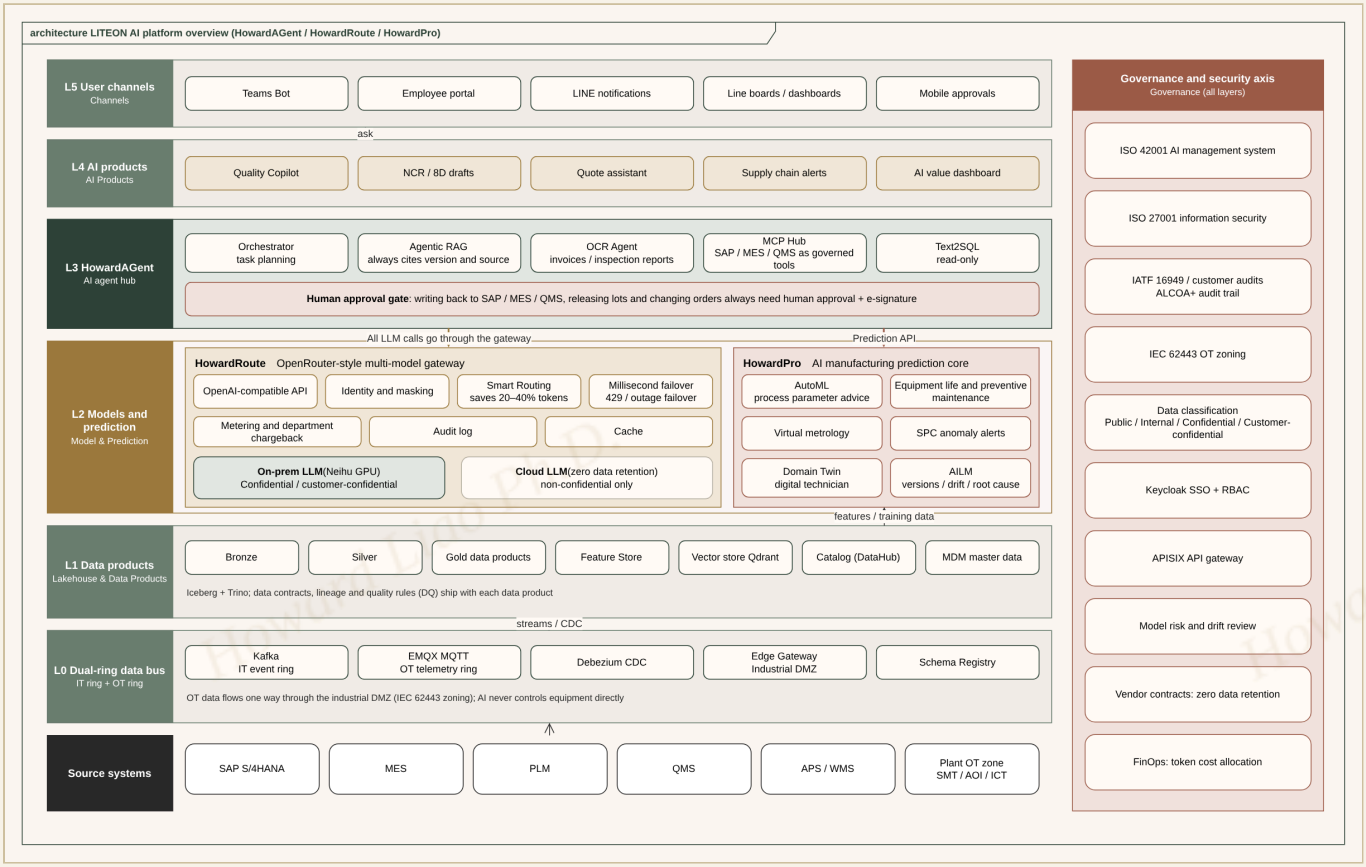

Figure: LITEON AI platform overview (UML architecture view, LITEON quality scenario)

HowardAGent agent hub

- Agentic RAG that always cites document version and source
- OCR agent for invoices, delivery notes and inspection reports
- MCP Hub: S/4HANA / MES / QMS as governed tools; Text2SQL read-only

Every write-back to S/4HANA / MES needs human approval

HowardRoute multi-model gateway

- One OpenAI-compatible endpoint for cloud and on-prem models
- Smart Routing: small models for simple tasks, large models for complex ones; 20–40% token savings
- Millisecond failover on 429 errors or outages

Customer designs and quotes use on-prem models only, with zero data retention

HowardPro manufacturing prediction core

- AutoML: process parameter advice and equipment life prediction
- Virtual metrology and SPC / AOI anomaly alerts
- Domain Twin digital workers that keep senior engineers' know-how

Line data stays in the plants and Neihu, never on public cloud

Four anchors of the ISO 42001 AI management system

Policy

AI usage policy added to the ISO 27001 document system

Risk

Accuracy and hallucination tests before launch; human review for high risk

Records

AI advice and human approvals kept in the audit trail

Vendors

Contracts forbid training on our data

Resilienza CASI · 06

NIST CSF 2.0, six functions: every cell has an owner, a metric and a drill

GV Govern

Security and AI policy, roles, risk appetite; quarterly board report

ID Identify

Assets and data classes; shadow AI inventory; supplier risk

PR Protect

Zero-trust identity, gateway masking, IEC 62443 zones

DE Detect

UEBA / ITDR behavior analytics; API abuse detection

RS Respond

DFIR playbooks, 14-day on-site WBS, external communication

RC Recover

Backup drills, outage resend, recovery time objectives

Red lines for OT and AI

- Machines never connect directly; data goes one way through the industrial DMZ
- AI never controls equipment; advice runs only after MES and engineer approval
- Customer designs and quotes use on-prem models only
- Every API transaction written to S/4HANA is traceable

Four-quarter roadmap and four gates, in step with the S/4HANA cut-over

Four quarters counted from the first day; quarter one overlaps the S/4HANA cut-over, so the core stays untouched.

QUARTER 1

Listen and quick wins

- Interview the CIO, business heads and CFO
- AI asset map and shadow AI inventory
- AI usage policy and data classes
- SOP knowledge base, S/4HANA new-process Q and A

QUARTER 2

Selection and PoC

- Three-route selection and TCO
- Hive API platform plus lakehouse PoC
- SPC / AOI alert PoC at the pilot plant
- First PO Academy cohort

QUARTER 3

Platform launch and pilots

- Model gateway and agent platform go live
- Grade A use cases live at the pilot plant
- Shortage and alternate alerts
- Monthly AI value dashboard

QUARTER 4

Replicate and scale

- Replicate to a second plant
- New use cases in weeks
- Annual benefits confirmed by the CFO
- Year-two portfolio submitted

◆ GATE 1
Scope and contacts (D01–D03)

◆ GATE 2
Selection and budget (D04–D06)

◆ GATE 3
PoC acceptance and launch conditions

◆ GATE 4
Annual benefit review

Six stages and decision gates

1 Current-state inventory
W1–W4 · D02

2 Scope confirmation
W5–W6 · D01 · D03

3 Platform selection
W7–W10 · D04–D06

4 PoC
W11–W18 · Acceptance

5 Build and acceptance
From W19 · Rollout

6 Handover to operations
After go-live · SLA

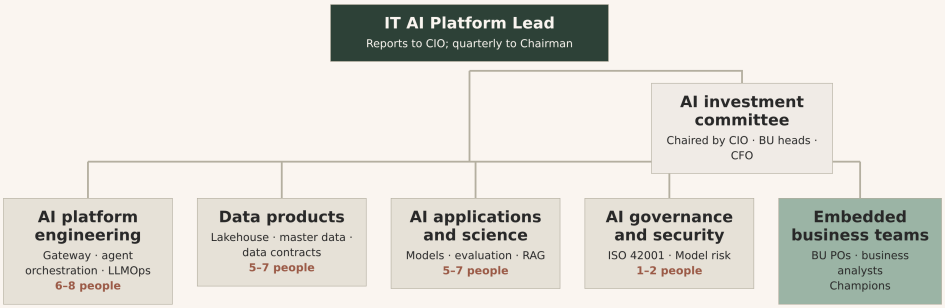

S/4HANA goes live worldwide on 2027.01.04. All Hive integration uses the API gateway and events and never changes the core during cut-over; the first 10 weeks cover only inventory, knowledge use cases and data platform preparation. Once cut-over is stable, interfaces connect to standard S/4HANA APIs instead of the old core.

Howard Liao Ph.D.

Organizzazione CONSULENZA · 06

Central platform plus embedded teams, with an ecosystem for specialist depth

The platform team supplies standards and components; business teams build use cases on the platform. Headcounts are planning assumptions.

The central platform provides standards and components; business groups build their own use cases — IT is not the bottleneck

Team	Scope	Roles	Size
AI platform engineering	Model gateway, agent orchestration, MLOps/LLMOps, monitoring	Platform technical lead, platform engineers, SRE	6–8
Data products	Lakehouse, master data, feature store, data contracts	Data technical lead, data engineers, data architect	5–7
AI applications and science	Model development, evaluation, RAG tuning	ML technical lead, data scientists, AI engineers	5–7
AI governance and security	ISO 42001, model risk, data classification	Governance manager (working with the security office)	1–2
Embedded business teams	Use-case delivery, process redesign	BU POs, business analysts, Champions	Staffed by the BU

External ecosystem (by category)

Cloud and AI vendors

Models, compute and cloud services, with zero data retention in contracts

SAP and ERP partners

Standard S/4HANA APIs, BTP, Datasphere

System integrators

Managed by SLA, acceptance thresholds and vendor scorecards

Academia and community

Internships, research partnerships, tech communities

> Governance: quarterly AI investment committee (chaired by the CIO with business heads and the CFO); monthly AI value dashboard; half-yearly report to the Chairman.

For the CHRO: how I lead, grow and keep people

Lead

A dual structure of central platform and embedded business teams; every lead has clear scope, a competency model and a quarterly architecture review. I have led IT teams of 50+ and rebuilt a 30+ person team from zero.

Grow

PO Academy: business leaders learn to write financial assumptions and acceptance criteria, graduating only after launching one use case; 30 in year one. Nine technical development tracks show engineers a clear path.

Keep

At least one successor for every lead; knowledge captured in SOPs, architecture decision records and knowledge bases; people stay for results and growth, not because of a single hero.

Change

Leaders learn first, IT tries first, then scale what works; a Champions network of 1–2 seed members per department promotes adoption and reports issues.

"Enterprise to the Cloud" industry event

e-Learning for civil servants: cloud management

Media

Vendor case study	Official APAC customer success video by a global cloud provider: container platform supporting global high concurrency with zero downtime	2024.03
Media interview	CIO magazine cover interview: using public cloud services to expand into global markets	2024.05
Technical feature	IT media feature: building a global data management platform	2024.09
Keynote	Keynote at a global database vendor conference in Taipei: a global-scale data management platform	2024.09
Keynote	CIO annual conference: seeing opportunity — cloud management in practice	2024.05
Public-sector course	Executive Yuan civil service e-learning platform course: cloud management in practice	2024.06

Credenziali CREDENZIALI · 03

Doctoral method, certified discipline

Education

Ph.D. in IT Management (2014)	Chaoyang University of Technology	Dissertation: A study of an integrated business self-service portal based on adaptive service-oriented architecture IT governance (archived at the National Central Library)
M.S. in Information Science (2006)	National Chung Hsing University	Data mining, decision support systems, cryptography; co-principal investigator of a healthcare cloud care project

Research and publications

- First author, SCI journal Multimedia Tools and Applications: Reversible secret-image sharing with high visual quality (2014)
- International journal paper: Utilizing GIS and GPS in Designing a Trilingual Tourist APP (2015)
- Long-standing thesis supervisor and reviewer for master's and doctoral students

Professional certifications

Security and AI governance	ISO 27001 Lead Auditor, ISO 42001 (AIMS) Lead Auditor
Projects and agile	PMP, ScrumMaster, Agile Coach, ESG Sustainability Manager
Systems and supply chain	ERP supply chain/manufacturing module certification, database vendor certified instructor, international barcode management certification
Continuing development	CISSP/CISM, cloud architect (in preparation)

Certificates and completion records

Days 30 / 60 / 90 / 180, and board KPIs

30
DAYS 1–30

Listen

- Interviews with the CIO, business-group heads and the CFO
- Inventory of existing AI applications, data and teams
- Confirm the S/4HANA timeline and integration points

AI asset map and current-state diagnosis

60
DAYS 31–60

Decide

- Use-case scoring and investment portfolio
- Platform route selection (SAP-native / public cloud / open-source on-prem)
- Organization design and hiring plan

AI platform blueprint, financial assumptions for top 5 use cases

90
DAYS 61–90

First results

- Platform MVP build starts
- 2 quick-win use cases live
- Publish AI usage rules

Demonstrable results, first quarterly report

180
DAYS 91–180

Scale

- Platform MVP live, aligned with the S/4HANA cut-over
- Grade A use cases piloted at a model plant
- First PO Academy cohort

New use-case launch time down to weeks

Year-one board KPI scorecard

Area	Metric	Target
Economic value	Verified annualized benefit (confirmed by the CFO)	Targets agreed within 60 days of joining
Platform	Number of live use cases; time to launch a new use case	≥ 10; ≤ 4 weeks
Adoption	Monthly active users of the AI platform as a share of employees	Rising every quarter
Organization	Certified POs; successors for technical leads	30; one per lead
Governance	Use-case risk assessment completion rate; major security incidents	100%; zero
Cost	Cost per thousand requests; compute budget attainment	Down every quarter; ±10%

Economic benefit targets are set with the CFO within 60 days of joining.

Competing for resources with the S/4HANA go-live

Before 2027 Q1, only use cases that do not touch SAP (quality, R and D knowledge)

Insufficient data quality

Build data products and unified definitions first, then models

PoC stuck at PoC

Define go-live criteria, PO and P and L line before starting

Technology for people who need it

Outside work I have long served as a medical IT advisor to a regional medical center, and since 2022 as executive director and CIO of a charitable foundation, supporting nonprofit digitization, smart long-term care and donation system security.

Medical IT

Medical data integration and protection

Smart long-term care
